

AMENDMENTS

In the specification:

Please amend paragraph [00120] on page 46 of the specification as follows:

[00120] In a preferred embodiment, the immunomodulatory agent decreases the amount of IL-9. In a more preferred embodiment, the immunomodulatory agent is an antibody (preferably a monoclonal antibody) or fragment thereof that immunospecifically binds to IL-9 (see e.g., U.S. patent application Ser. No. _____ 10/823,810 filed Apr. 12, 2004 entitled "Methods of Preventing or Treating Respiratory Conditions" by Reed (Attorney Docket No. 10271-113-999), U.S. patent application Ser. No. _____ 10/823,253 filed Apr. 12, 2004 entitled "Recombinant IL-9 Antibodies and Uses Thereof" by Reed (Attorney Docket No. 10271-112-999), and U.S. patent application Ser. No. _____ 11/105,268 filed Apr. 12, 2004 entitled "Anti-IL-9 Antibody Formulations and Uses Thereof" by Reed (Attorney Docket No. 10271-126-999), all of which are incorporated by reference herein in their entireties. Although not intending to be bound by a particular mechanism of action, the use of anti-IL-9 antibodies neutralize the ability of IL-9 to have a biological effect and thereby blocks or decreases inflammatory cell recruitment.
